Agile and adaptable project teams with employees from different areas
Level N

Group N

Group N

Project Management tasks

- Intensive task force experience in efficiently implementing project goals
- Planning and implementation of change management processes in the IT environment
- Analytical skills required to analyse IT structures and adapt them to the new environment
- Software development for special topics in middleware and business applications for the entire software environment (WEB, DB, cloud structures)
- Planning and drawing up concepts for restructuring the software landscape
- Creating innovative products and integrating into companies' existing IT infrastructures
- Automation of business processes taking into account existing processes, with a high level of stability
- Preparing ROI analyses for determining potentials for optimization
- Analysing complex existing software structures, auditing the application landscape

Project 1	Project 2	Project 3	Project 4	Project 5
•Training sessions •Trade Fairs and events	•Software development according to customer requirements •Further development of current products	•Managing migration projects for customers •Project coordination for sensitive tasks	• Concept for new innovative solutions •Automation products, e.g. "electronic doorman"	• Auditing applications • Cloud Activities

Automation tasks

- Analytical investigations of available resources in data centre operations

- Process analysis and optimization according to ITIL

- Determining available capacities, mapping automation scenarios

- Transparent presentation of resource utilization according to the causative principle

References: 2006-2007 Fraport AG, 2008-2012 Deutsche Telekom AG

Software development Tasks

- Manufacturing the products Userbooster, OpenLDAP for Windows, ETISS, ETOSS, developing administration tools for special application scenarios

- Modern software development with full transparency during the entire development process, consideration of technical framework parameters, utilizing the maximum technical possibilities

- Supporting and automation of infrastructure applications (e.g. central Kerberos management platform in UNIX)

Software development tasks

The philosophy we stand for

- Assertiveness: Service providers must also be "doers" who implement decisions rationally and uncompromisingly, integrating internal company capacities

- IT must serve people: anything not supporting employee productivity is counter-productive

- Because 100 % homogeneous IT infrastructures do not exist, technologies used must provide maximum compatibility. Our motto is therefore "interoperability", "transparency", "future viability"

- We see ourselves as a software manufacturer and as a reliable partner in the fields of project management and automation. Combining both these fields of activity is our creative challenge.

Our company's own products

- ## Userbooster
  - Software for managing directory services
  - Tracking statistics in the field of capacity management

- ## OpenLDAP for Windows
  - Providing the current suite for OS Windows

- ## ETISS/ETOSS
  - computer-controlled administration of automatic pay stations

- ## Our independent cloud infrastructure
  - Transition from Legacy IT to Cloud Components

About our company

maxcrc GmbH

Founded in 2003

- Service provider for medium-sized businesses & large customers
- A solutions provider & software producer, independent of manufacturers
- Development capacities with special knowledge in programming automation scenarios
- ITIL Certification
- Strategic partnerships for completion across the entire bandwidth
